### A-Structure of the Rake

What distinguishes EnetPoker from the competitors is above all the competitive structure of the rake.

Enetpoker is, in fact the only network that applies a deduction on the rake equal to 6%, with a greatest cap of 5€, on whatever type of table (sia from 2, that from 10 gamblers). Below is the structure of the rake, explained in this diagram:

Rake Charge	Max	Table Stake
6%	5€	3/6
6%	6€	5/10
6%	7€	10/20

These rake parameters applied on our game lobby allow the generation of profits which are almost double to those of other present online network poker.

### Our Competitors

In the table below, we give examples of how our competitors work.. It is clear that their profit margins are inferior.

Players N.		Max Rake
2 players	€ 0,01 or each €0,20	€ 0,75
3 players	€ 0,01 or each €0,20	€ 2,00
4-10 players	€ 0,01 or each €0,20	€ 3,00

The rake structure that we adopt ignores the present number of gamblers on the table and allows a yield of at least 30-40% superior to that of other poker network present on the market.

### NO CAP TABLES

In addition to the already existing tables, EnetPoker has decided to put online some new NO CAP tables( tables with no limits). EnetPoker has made this decision in order to keep its steady growth and to enable its customers to enjoy the whole network.

The goal of such tables is to capitalize on all the available community resources, attempting at the same time - as always in Enet's corporate strategy - to maximize the profits of the skins which provide the community with losing traffic.

In the first few days, these tables have enabled our sportbooks to double their generated rake.
